JOSUE ISAI SALAZAR CASTRO

Full Stack Developer · Flutter · Applied AI

La Piedad, Michoacán, México joshi.jc2032@gmail.com Cell 352 188 7541

Full Stack developer focused on artificial intelligence applied to industrial processes. Fine-tuned Gemma 4 12B with QLoRA on CUDA and integrated a Qwen model to interpret drawings, define racks, estimate quotations, and deliver the drawing with the proposed layout. Also develops operational systems in Flutter and Supabase.

Tech Stack & Tools

CORE Flutter, Supabase, C#, MySQL, SAP BTP/HANA, Gemma 4 12B (QLoRA), Qwen.	**WORKING KNOWLEDGE** Angular, TypeScript, React, Vue, Java, Spring Boot, Node, PHP.
CLOUD Firebase, AWS, Docker, Git.	**SCOPE** Working knowledge means I can support a project, not that each item is a specialty.
TOOLS GitHub, GPS, n8n.	**SOFT SKILLS** Problem-solving, teamwork, adaptability.

Professional Experience

AI Engineer · PM — Aug 2025 – Present

Fine-tuned Gemma 4 12B with QLoRA (CUDA) for 3D rack assembly with real parts, plus a Qwen model that reads drawings.

3D Assembly, Quotation & Drawings Agent — Gemma 4 12B + Qwen

- Gemma 4 12B, fine-tuned with QLoRA, builds the 3D assembly from real parts and picks the layout that best uses the warehouse.
- The Qwen model, specialized in reading drawings, produces the racks, the estimated quote, and the drawing already fitted with the racks.
- A rendering engine produces the 3D render from the warehouse dimensions, constraints, and installation conditions.
- Delivers the 3D render, drawings, and an estimated quotation. The time to prepare that response fell from 40–80 working hours (1–2 weeks at 8 h/day) to 10 minutes: a time saving of 99.6%–99.8% was achieved.

Full Stack Developer (Freelance, part-time) — Dec 2025 – Present

In parallel with PM: custom software for restaurants and administrative control.

Restaurant Management System — Flutter + Supabase

- Built and migrated the Zapata, Sushi Lim, and Casa Lim apps in Flutter + Supabase (auth, storage, and realtime).

Web Platform & Admin Control (MAXIFUM) — Flutter + GPS + AI

- Designed the internal control system with roles, tasks, GPS, and AI validation of photo evidence.
- Built the desktop app for real-time staff monitoring.

Intern · Mitsubishi Electric Automotive de México — Aug 2025 – Dec 2025

In parallel with PM: digitized Kaizen proposal workflows on a modular C# – MySQL solution.

- Built C# UI modules with proposal history and forms that follow workflow status.
- Designed the centralized module: filtering, PDF export, and role-based multi-step approval.
- Migrated modules to Angular and ran validation and testing for the cutover.

Intern · Enjo-it — Sep 2023 – Feb 2025

Automated business processes in SAP BTP Cockpit, with SAP HANA as the system of record and operations moved to the cloud.

- Designed email approval workflows in SAP BTP Cockpit: each request followed business rules and, once approved, was stored in SAP HANA.
- Migrated operational data to the cloud with SAP BTP, joining storage, requests, and approvals in one flow.

Education & Languages

B.S. in Information and Communication Technologies
National Technological Institute of Mexico, La Piedad Campus
University · 2021 – Present · Expected graduation: Jan–Feb 2027

Associate Degree in Computer Science
Technical High School, Conalep · Aug 2018 – Jun 2021

LANGUAGES
Spanish: Native · English: B1
